                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   49656: contig of 49656 bp in length

NOTE: This is a 'working draft' sequence. It currently consists of 49 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                     Contact sequence_submissions@genome.wi.mit.edu

                                                                                                                                                                                                     Center: Whitehead Institute/ MIT Center for Genome Research
                                                                                                                                                                                                                                                                                                                                                                           * NOTE: This record contains 74 individual

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                            100 bp

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as cytostatic; hepatotropic; vulnerary; antiparatic antipornian; nootropic; neuroprotective; categoralic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coaqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; proteins and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autinifiammatory disease; to enhance nocturnal haemoglobinuria, antinifiammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                           frame

A novel receptor interacting factor (AAW18226) is designated SWRT, i.e. silencing mediator (co-repressor) for retinoic acid receptor (RAR) and thyroid hormone receptor (RR). Its association with RAR and TR both in solution and on DNA response elements is destabilised by ligand. The interaction of SMRT with mutant receptors correlates with the transcriptional silencing activities of receptors. In vivo, SMRT functions as a potent co-repressor. A call DNA binding domain fusion of SMRT behaves as a frank repressor of a GAL4-dependent reporter. These data identify a novel class of cofactor which is believed to represent an important mediator of cofactor which is believed to represent an important mediator of a HeLa library in a two-hybrid screen using a GAL4 DNA binding domain/RXR fusion protein as bait.
                                                           New co-suppressor of steroid-thyroid hormone receptor activity - also methods for identifying compounds that relieve its suppressant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Mouse retinoid X receptor (RXR) interacting protein RIP13 (AAR99738) is a candidate transcriptional co-activator. It was identified using an in vivo interaction trap system for the isolation of proteins that physically interact with RXRs, esp. with the ligand binding domain of human RXR alpha. Recombinant RIP13 can be obtd. using a cDNA clone (AAT31931) obtd. from a mouse liver library. RIPs (see also AAR99735-37 and AAR99739) can be used to modulate or mediate RXR function, and may be used therapeutically or to raise antibodies.

osteopathic, antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antilaflammatory; antibacterial; antiviral; antifungal; antirheumatic; antinflammatory; antibacterial; antiviral; antifungal; antiantenery; antibacterial; antiviral; antifungal; antiantanemic. The sequences can be used to determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, rythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic aneamia, burns, wounds, home and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;

binding protein (CBP) activator protein (SRCAP) polypeptide. It has APPase activity and is capable of activating transcription. SRCAP polypeptides are useful for activating transcription in a cell, for enhancing CREB (CAMP requiatory element) binding protein (CBP) mediated activation of transcription in a cell, for treating a patient having a disease involving a function such as insufficient transcription of a gene, e.g. a gene mediated by CBP co-activation, DEAD box RNA dependent helicase, adenoviral DBP protein, beta-actin or a nuclear receptor as antibodies, antisense molecules, polynuclectides or ribozymes, are useful for treating diseases mediated by SRCAP-activated transcription, for example, infection by adenovirus, hepatitis C virus, human immunodeficiency virus type-1, Epstein Barr virus, cytomegalovirus or ellrslppqllegpsspsqtpsshd-sdtrdg--peegaeeeppqvleikppp--savt 336 137 KDRSLTGKLEPVSPPSPPH--TDP------ELELVPPRLSKEEL-IQNMDRVDREI 183 184 TMVEQQISKLKKKQQQLEEEAAKPPEPEKP------VSPPPIESKH-----R 224 ---etriaelrkegfwslkrlpkvpepprpkghwdylceemgwlsadfagerrwkrgvar 112 SLVQII ---YDENRKKAEAAHRILEGLGPQVELPLYNQPSDTRQYHENIKINQAMRKKLI 281 QERMQSRVGQRGSG-LSMSAARSEHEVSEIIDGLSEQENLEKQMRQ-LAVIPPMLYDADQ 404 QRIKFINMNGLMADPMKVYKDRQVMNMWSEQEKETFREKFWQHPKNFGLIASFLERKTVA 464 -----ECVLYYYL-----TKKNENYKSLVRRSYRRRGKSQQQQQQQQQQQQQQQ regelsmeellqqyagayapgsgssededevdanssdcepegpveaeeppgedsssqs 446 dsvedrsedeedehseeetsgssaseesesesedaqsqsqadeeeedddfgveyllar 506 vmlnwemelkrwcpsfkiltyygaqkerklkrqgwtkpnafhvcitsyxlvlqdhqafrr 686 222 ssppppasrlddedgdfqpqedeeeddeetieveeqqegndaeaqrreiellrregelpl 281 LYFKRRNHARKQWKQKFCQRYDQLMEALEKKVERIENNPRRRAKESKV------QPMPRSSQEEKDEKEKEKER-----EKEEEKPEVENDKEDLLKEKTDDTSG-----E deeqseadagsgpptpgpttlgpkkeitdiaaaaeslqpkgytlattqvktpiplllrgq RNWSA1ARWGSKTVSQCKNF-----YFNYKKR------QN-----L Indels 1169; Length 3118; ---RITRSMANEANSEEAI-TPQQSAELA--Score 477.5; DB 22; Pred. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; sequences have activities such as: cytostatic; hepatotropic; vulnerary; osteopathic; antiparkinsonian; nocitopic; neuroprotective; catalant; thrombolytic; cagulant; vasotropic; nmunostimulant; cardiant; thrombolytic; cagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antidabetic; hypotensive; dermatological; or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, virai, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anneamia, burns, wounds, bone and cartilage damage, coaqulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ouery Match 3.5%; Score 456; DB 21; Length 2971;

The present sequence is an Snf2 related CREB (cAMP regulatory element)

Dinding protein (CBP) activator protein (SRCAP) polypeptide. It has
Dipperides are useful for activating transcription. SRCAP

DOLYPEPERIOR (CAMP regulatory element) binding protein (CBP) -mediated
activation of transcription in a cell, for rectivating protein (CBP) -mediated
activation of transcription in a cell, for treating a patient having a
disease involving a function such as insufficient transcription of a
gene, e.g. a gene mediated by CBP co-activation, DEAD box RNA dependent
helicase, adenoviral DBP protein, beta-actin or a nuclear receptor
affected by SRCAP protein. Compounds that modulate SRCAP function, such
as antibodies, antisense molecules, polynucleotides or ribozymes, are
useful for treating diseases mediated by SRCAP-activated transcription,
for example, infection by adenovirus, hepatitis C virus, human
immunodeficiency virus type-1, Epstein Barr virus, cytomegalovirus or Claim 1; Page 86-94; 103pp; English. hepatitis B virus.

The p3103 protein contains both an SH3 domain and a PDZ domain, and was identified as being able to interact with the protein SAPAPl via the yeast two-hybrid system. P3103 protein is therefore thought to be involved in neuronal function, and may be useful for the study of the human nervous system, and for the diagnosis, prevention and treatment of various neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                        Rat; p3103 protein; Synamon; SH3 domain; PDZ domain; SAPAP1 interaction; neuronal function; nervous system; neurological disorder.

```
The sequence given is a full length translation from the megakaryocyte stimulating factor (MSF) precursor. The sequence covered by exons II, stimulating factor (MSF) precursor. The sequence covered by exons II, III and IV encodes megakaryocyte stimulating factor (MSF). This sequence is modified by the addition of an Vterminal sequence encoding a secretory leader, an initiating methionine proceeding exon II and a terminating codon following exon IV. The cDNA sequence given contains sequences derived from human megakaryocyte cochony stimulating factor. (meg-CSF). Exon I contains the initiating methionine, and encodes a classical mammalian protein secretion signal sequence. The sequence of classical mammalian protein secretion signal sequence. The sequence cochony the original meg-CSF includes exons II-IV and is thought to this gene may be cleaved in different ways to yield a family of mRNA's each encoding a different wisp protein. Exons V and VI are thought to be related to the activity of the factor and are also implicated in the stability, folding and processing of the complement of MSF with other cytokines. Exons V = XII are believed to be implicated in the processing or folding of the appropriate structure of the resulting factor, ie. one or more of these exons may contain sequences which direct proteolytic cleaves, adhesion, organisation of the cellular matrix or extracellular matrix processing. Both naturally various combinations of alternatively spliced exons from this sequence, with the exons spliced together in differing orders to form different members of the MSF family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human mega-karyocyte stimulating factors - for treating immune deficiencies, cancer, exposure to radiation or drugs. bacterial and viral infections, etc.

The invention relates to a method of treating osteoarthritis via the administration of a composition comprising the camptodactyly-arthropathycoxa vara-perioarditis (CACP) protein.

The composition may be administered via intra-articular or intravenous of the invention may be administered via intra-articular or intravenous injection. The human CACP protein is identified in the invention as being megakaryocyte stimulating factor (MSF). The gene encoding CACP protein (MSF) is located on chromosome 1q25-31, and mutations in this gene are responsible for the heritable disorder camptodactyly-arthrough coxa vara-pericarditis, in which patients have synovial hyperplasia without evidence of inflammation. CACP protein (MSF) acts as a synovium lubricant, and can be used to lubricate tissue and contract in the treatment of setbearthritis. The composition may be applied to reduce the symptoms of osteoarthritis (e.g., joint pain, loss of range of movement or joint damage). The present sequence correspond to the symptom of osteoarthritis (e.g., joint pain, loss of range of movement or joint damage). The present sequence is not given in its entirety in figure 4 of the specification, although a GenBank accession number was given. This sequence was therefore obtained from GenBank (U70316).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful for

Human MSF; megakaryocyte stimulating factor; tribonectin; datternative splicing; joint boundary lubricant; 0-linked oligosaccharide; osteoarthritis; tribosupplementation; tissue adhesion inhibition; friction coefficient reduction; gene therapy; antiarthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            alternative splicing of the human MSF (megakaryocyte stimulating factor) agene. The tribonectin has at least one O-linked oligoaaccharide lubricating molety and has a polypeptide sequence comprising 1-76 repeats of a moit having at least 50% identity to the sequence KEPAPTT (AAB29774). The invention also relates to a nucleic acid encoding a human MSF-derived tribonectin, a blocompatible composition comprising a human mSF-derived tribonectin, a blocompatible composition and a method of diagnosing osteoarthritis or a predisposition to osteoarthritis by measuring the amount of MSF or its fragment in a biological sample of a mammal, wherein an increased amount of MSF compared to a control indicates the presence of or predisposition to developing osteoarthritis. The tribonectin and DNA encoding it are useful in the

treatment of osteoarthritis, where they may be used for lubricating mammalian joints, such as articulating joints of humans, dogs or horses. The tribonectin, when formulated as a membrane, foam, gel or fibre, is useful for inhibiting adhesion between two surfaces such as the injured tissues of a mammal, where the injury is caused by a surgical insertion or trauma, or an artificial device e.g., an orthopaedic implant. In particular, one of the surfaces is pericardial tissue. DNA encoding a tribonectin may be used in gene therapy. The present sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        986 REDA--APTKPAPPAPPPPPQNLQPESDAPQQPGSSPRGKSRSPAPPADKEAFAAEAQKLP 1043

```
The present sequence represents a rat Shankla polypeptide. The specification also describes Shank2 and Shank3a. The Shank polypeptides have an ankyrin domain, PDZ domain, proline-rich domain, and SAM domain. SH3 domain, PDZ domain, proline-rich domain, and SAM domain. Shank polypeptides play a significant role in the post synaptic density cytoskeleton. Compounds that modulate Shank proteins are useful for treating a disorder associated with glutamate receptors such as epilepsy, glutamate toxicity, disorders of memory, disorders of learning, stroke, schizophrenia, Alzheimer's disease, tissue degeneration and disorders of brain development. A disorder associated with Shank protein activity such as cardiac disorder, disorder of musculature disorder, neurological disorder, psordaric disorder, renal disorder, unterine disorder or a disorder of bronchial tissue is also treated by a compound that modulates Shank protein
                                                                                                                                                            New Shank polypeptide for identifying Shank protein modulator compounds used to treat Alzheimer's disease and stroke, comprises an ankyrin domain, SH3 domain, PDZ domain, proline-rich domain, and SAM domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SPAPPADKEAFAAEAQKLPGDPPCWTSGLPFPVPPREVIKASPHAPDPSAFSYAPP---- 1080

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5773249
GENERAL INFORMATION:
APPLICANT: CAPPELLO, Joseph
TITLE OF INVENTION: High Molecular Weight Collagen-Like
TITLE OF INVENTION: Protein Polymers
TITLE OF INVENTION: Protein Polymers
NUMBER OF SEQUENCES: 135
CORRESPONDENCE ADDRESS:
ADDRESSEE: FLEHR, HOHBACH, TEST, ALBRITTON & HERBERT
STREET: A Embarcadero Center, Suite 3400
CITY: San Francisco
CITY: CANTER: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     COMPUTER: IBM PC compatible
